

JOHN OWIYA ODHIAMBO

Software Engineer | Backend & Web Development | Java • Full-Stack • Databases

Nairobi, Kenya

+254 795 583 817 | odhiambojohnowiya@gmail.com

GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Software Engineer specializing in backend systems, web development, and database-driven applications. Experienced in designing and implementing Java-based systems with MySQL integration, focusing on secure authentication, role-based access control, and scalable system architecture.

Strong foundation in object-oriented programming, REST-style system design concepts, and full-stack web development using modern front-end technologies. Passionate about building efficient, maintainable, and user-focused software solutions.

CORE SKILLS

Backend & Programming:

Java (Swing, JDBC), Java SE, JavaScript, Python (basic)

Web Development:

HTML, CSS, JavaScript, Responsive UI Design

Databases:

MySQL, relational database design, normalization, SQL query optimization

Architecture & Concepts:

- Object-Oriented Programming (OOP)
- MVC-style system design (basic)
- Role-Based Access Control (RBAC)

- Authentication & Authorization systems
- CRUD application architecture

Tools & Platforms:

Eclipse IDE, VS Code, Notepad++, Git/GitHub, Spring Boot

PROFESSIONAL EXPERIENCE

Software Developer — Academic Management System Project

University Project | Kisii University

- Designed and developed a full-stack Student Results Management System using Java Swing and MySQL
- Implemented role-based access control for Admin, Lecturer, HoD, and Student modules
- Built secure authentication system with login, registration, and password validation workflows
- Developed CRUD-based academic modules for results processing, timetables, and complaints
- Integrated JDBC for persistent database communication and system reliability
- Applied object-oriented design principles for modular and maintainable architecture

Web Developer — Responsive Web Applications

Academic & Personal Projects

- Built responsive websites using HTML, CSS, and JavaScript
- Designed clean, mobile-first user interfaces for business and academic use cases

- Implemented structured layouts focusing on usability and accessibility
- Improved frontend interactivity using JavaScript-based enhancements

Software Developer — Authentication Systems

Personal Projects

- Built secure login and registration systems integrated with MySQL databases
- Implemented session-based authentication and user role validation
- Added input validation and secure credential handling techniques
- Designed backend logic for access control and system protection

KEY PROJECTS

Student Results Management System

- Java Swing + MySQL desktop application for academic management
- Modules: Student, Lecturer, HoD, Admin
- Features: results management, timetables, complaints system
- Secure database integration using JDBC

EDUCATION

Kisii University, Kenya

Bachelor of Science in Applied Computer Science

Year 3 (Ongoing)

Key Coursework:

Object-Oriented Programming, Database Systems, Computer Security, Software Engineering

Mbita High School, Kenya

KCSE – B+ (73 Points)

CORE COMPETENCIES

- Software development lifecycle understanding
- Backend system design and implementation
- Database design and integration
- Problem-solving and debugging
- Fast learner in new technologies
- Team collaboration and technical communication

TECHNICAL PROJECT HIGHLIGHTS

- Built full academic management system with role-based access control
- Developed secure authentication and login systems
- Designed database-driven applications using MySQL and JDBC
- Created responsive front-end interfaces using HTML/CSS/JS
